Sentry™

Multi-Point Hinged Patio Door
Locking System
Innovative And Secure.

North American Designed Flexibility With Optimal Security.

Sentry™

Truth Hardware presents the new Sentry™ Multi-Point Hinged Patio Door System – smart, sophisticated and stylish hardware for hinged doors. This innovative system is packed with features that now gives you the ability to offer a complete line of Truth Hardware for windows, sliding doors, and now hinged patio doors.

Market Driven

Featuring a 90 degree thumbturn located above the handle, this system is designed specifically for the North American market.

Flexible. The Sentry™ multi-point locking system can be customized into 3 or 5 point tongue, hook or shoot bolt versions. Featuring a modular design, this system modifies easily to fit custom door sizes.

Intuitive. Independent deadbolt feature allows you to secure the door without engaging the remote lock points.

Market Focused. Truth's Sentry™ multi-point locking system is available with 16 and 20 mm faceplates to fit standard eurogrooves and 92 mm spacing between the handle and thumbturn.

Secure. The locking system offers superior strength with a 1" throw on deadbolt and shoot bolts. Laminated SST dead bolt with anti-saw pin and anti-back drive features prevent tampering for added security. Remote lock-point locations optimized closer to top and bottom of the door for improved locking performance. When dead bolt is activated, center latch cannot be depressed thus producing an added measure of security. Passive hardware is available in either a handle activated eurogroove version or a manual dual direction single lever flush bolt.

Reliable. Durable handle return spring prevents handle sag over time, while corrosion resistant 300 series SST ensures the good looks and performance of the product for years to come.

Smooth. Truth's unique "Duo-Glide" lock mechanism is superior to standard single drive systems. The "Duo-Glide" two-way action balances the lock system providing smoother, quieter, and easier operation. "Duo-Glide" allows the lock points to engage in tension rather than compression thereby reducing stress on other elements of the lock system for longer life.

Installation Friendly. The center latch can be reversed with the hardware already installed in the door. Non-handed anti-slam device automatically moves to the correct position when the door is closed preventing damage to the door and hardware. Tongue option fits standard 16 mm or 20 mm eurogrooves without additional remote lock processing.
